NOTES

Whenever possible we use seasonally adjusted data which removes normal seasonal variations to reveal the underlying trends in the data. Adjusted data are identified as Seasonally Adjusted or SA.

Some series subject to irregular fluctuations are presented on a three-month moving average basis. All such series included in this report are also seasonally adjusted. Where space is limited these are tagged $3MMA\ SA$.

Series not labeled as seasonally adjusted are unadjusted or raw. Some unadjusted series in this report are explicitly identified as such.

When a new forecast has become available since the previous issue of Business Indicators the forecast date will appear bold.

Where the change from one period to next period is positive, figures appear green; when change is negative, red; no change, black.

For the purpose of this presentation, 'positive' is defined as GDP increase, unemployment rate decline, consumer price index decline.

Applies only to forecasts table and provides an indication of which way sentiment is moving.
